Digital Marketing & Technology Services

AI USAGE & CLAIMS POLICY

What Redsans Digital's AI Tools & AI-Assisted Work May and May Not Claim

Effective Date: 16 September 2026 | Last Reviewed: 16 September 2026

Redsan Digital's Pvt. Ltd. ("Redsan Digital's", "the Company", "we", "us", or "our") uses artificial intelligence ("AI") tools — including generative text, image, video, and automation tools, and AI-assisted chat/support tools — to support the delivery of our digital marketing, creative, and technology services ("Services"). This AI Usage & Claims Policy ("Policy") sets out what our AI tools, and any AI-assisted content or communication we produce, are permitted to state or claim, and the safeguards we apply, so that clients ("Client", "you", or "your") and their audiences can trust what they see.

This Policy applies to AI used by Redsans Digital's in the course of the Services, and to AI-generated or AI-assisted deliverables we produce for or on behalf of a Client. It should be read together with the Master Service Agreement, the Service Limitations Policy, and the Privacy Policy governing your engagement.

1. Purpose & Scope

This Policy exists to make sure that AI is used at Redsans Digital's as a tool that supports our team's judgment — not as a substitute for truthfulness, evidence, or human accountability. It governs:

- AI used internally to draft, ideate, or accelerate work (e.g., ad copy, blog content, creative concepts, code, reports, analysis);
- AI-generated or AI-assisted images, video, voice, or other media produced for a Client's campaigns or assets;
- AI-powered chatbots, auto-responders, or virtual assistants deployed by Redsans Digital's on our own or a Client's channels; and
- Any claim, statement, or representation — about a product, service, result, or the AI itself — that originates from or is materially shaped by an AI tool.

This Policy does not restrict a Client's own independent use of AI tools outside our Services. Where Redsans Digital's is asked to build, configure, or manage an AI tool on a Client's behalf (e.g., a client-facing chatbot), the applicable SOW will specify the agreed scope, and this Policy governs what that tool may claim.

2. Where and How We Use AI

AI tools may be used at various stages of our work, including first-draft copywriting, image/video asset generation or editing, keyword and trend research, code scaffolding, data summarisation, and reporting. AI is used to accelerate and support our team's work — it does not replace strategic decision-making, client sign-off, or final quality control, all of which remain with Redsans Digital's human team, as described in Section 3.

3. Human Oversight & Review

Every deliverable that is generated or assisted by AI is reviewed by a member of our team before it is sent to a Client or published on the Client's behalf. Human review includes checking for:

- Factual accuracy and consistency with verified, client-approved information;
- Compliance with the claims standards in Section 4 and the prohibitions in Section 5;
- Tone, brand alignment, and appropriateness for the intended audience; and
- Legal and platform-policy compliance (advertising standards, platform ad policies, and applicable law).

AI-assisted output is treated as a first draft or working aid, not a final, unreviewed deliverable. Final responsibility for what is published rests with Redsan Digitals and, where the Client provides final sign-off, with the Client.

4. What AI-Assisted Content May Claim

AI-assisted content produced by Redsan Digitals is held to the same truthfulness standard as content written entirely by hand. AI-assisted content may make a claim about a Client's product, service, or offer only where:

- The claim is factually accurate and can be supported by information provided or verified by the Client;
- Any statistic, study, award, certification, or comparative claim (e.g., “#1”, “best”, “fastest”, “proven to...”) is backed by a real, verifiable source reviewed by a human team member before publication; and
- The claim complies with applicable advertising standards (including guidance from the Advertising Standards Council of India, sector-specific regulators, and platform ad policies) and the Client's own regulatory obligations.

AI tools are never permitted to originate a factual claim, statistic, testimonial, or comparison that has not been independently verified by a human team member against a real source.

5. Prohibited Claims

Regardless of whether content is AI-generated, AI-assisted, or written by hand, Redsan Digitals will not publish or approve content that:

- States or implies a false, unverifiable, or exaggerated claim about a product, service, result, or credential;
- Fabricates statistics, research findings, reviews, testimonials, or case studies, or attributes invented quotes to real people or organisations;
- Uses AI to generate a person's likeness, voice, or identity (including a deceased person) without that person's (or their estate's) verified consent;
- Presents AI-generated images, video, or voice as genuine unedited photography/footage/recordings where that distinction is materially misleading to the audience;
- Makes medical, legal, financial, or other regulated professional claims or advice on a Client's behalf, unless reviewed and approved by a professional qualified to make such claims;
- Guarantees a specific business result (rankings, sales, leads, ROAS) as a consequence of using AI in the Services, which would conflict with our Service Limitations Policy; or
- Represents an AI chatbot or assistant as a human being where a reasonable user would be misled about who or what they are speaking with.

6. Disclosure of AI Use

Where required by applicable law, platform policy, or the Client's own brand standards, Redsan Digitals will label or disclose that content is AI-generated or AI-assisted (for example, synthetic imagery, AI voiceovers, or an AI-powered chatbot). Clients may request a specific disclosure approach (e.g., a visible “AI-generated” label) or may request that AI not be used for particular deliverables, as set out in Section 9.

7. Accuracy, Hallucination Risk & Fact-Checking

AI tools can produce plausible-sounding but incorrect or fabricated information (sometimes called “hallucination”). Redsan Digitals treats this as a known limitation of the technology, not an acceptable basis for a client-facing claim. Accordingly:

- No statistic, data point, quote, citation, or factual assertion generated by an AI tool is published without independent verification against a credible source;

- Where a fact cannot be verified within a reasonable time, it is removed or rephrased as a qualitative statement rather than presented as fact; and
- Clients are encouraged to flag any AI-assisted content that appears inaccurate so it can be corrected promptly.

8. Intellectual Property & Third-Party Rights

Redsan Digital takes reasonable care to use AI tools in a manner consistent with their licence terms and to avoid outputs that knowingly infringe a third party's copyright, trademark, or other rights. Ownership of final, approved AI-assisted Deliverables transfers to the Client on the same terms as set out in the Intellectual Property clause of the Master Service Agreement. Because the intellectual-property treatment of AI-generated content is still evolving in Indian and international law, Redsan Digital does not guarantee that any particular AI-generated asset is eligible for copyright protection, and will advise the Client where this is a material consideration for a specific deliverable.

9. Client Preferences & Opt-Out

A Client may request, in writing, that AI tools not be used for specific deliverables, or that all AI-assisted content be clearly flagged for the Client's review before use of any kind. Such requests will be accommodated where reasonably practicable and may affect turnaround time or fees, as agreed in the applicable SOW or Change Order.

10. Limitation of Liability

This Policy operates alongside, and does not expand, Redsan Digital's liability beyond what is set out in the Master Service Agreement and the Service Limitations Policy. Redsan Digital's use of AI as a drafting and productivity aid does not create any warranty or guarantee beyond those expressly stated in a signed SOW, and our aggregate liability remains subject to the limitation of liability clause in the Master Service Agreement.

11. Changes to This Policy

Redsan Digital may update this Policy from time to time to reflect changes in AI technology, industry practice, platform policies, or applicable law. The "Last Reviewed" date at the top of this document will be updated accordingly, and material changes will be communicated to active clients by email. The Policy in effect at the time an SOW is signed will govern that specific engagement, unless the parties agree otherwise in writing.

12. Contact Us

For any questions about this AI Usage & Claims Policy, or to flag AI-assisted content you believe is inaccurate or non-compliant, please contact us:
